We want to get rid of the duplicate apps ex-instagram is repeated 4 times(rows) so it would give instagram a higher rating than deserved so we can use the row for instagram with the highest no. reviews for more reliability. To do this we use dictionary to quickly track highest review count for each app whilst going thru lots of rows. It checks if we've seen app before and then compares and updates max review no.

Building the Dictionaries: (dictionaries allow instant look up so faster compared to lists-slow as more time=list bigger)

```
In [ ]: reviews_max = {} #higher no. reviews=more reliable rating. -creates empty dictionary
        #key will be the app name, and the value will be the highest number of reviews
        for app in android: #starts for loop and goes thru each row in android and no. of reviews
            name = app[0] #takes first element of the row(apps name) and stores in variable
            n_reviews = float(app[3]) #takes 4th element(no.reviews)
            #Converts to a float (decimal) as data is stored as strings in csv
            #example App A → "300" reviews
            #App B → "1000" reviews
            #both stored as strings as csv store everything as text. "300"
            #as when comparing strings, Python checks character by character
            # "3" comes after "1" → so "300" is considered bigger than "1000"
